## EDUCATION

<b>Tsinghua University</b> <i>Ph.D. student in Computer Science, Institute for Interdisciplinary Information Sciences</i> Advisor: Prof. Jian Li	Incoming at Sept. 2025 Beijing, China
<b>Shanghai Jiao Tong University</b> <i>B.S. in Mathematics and Applied Mathematics (Hons), Minor in Finance, Zhiyuan College</i> Advisor: Prof. Zhenli Xu	Aug. 2021 – June 2025 Shanghai, China
<b>The Chinese University of Hong Kong</b> <i>Exchange Student, Department of Mathematics</i>	Jan. 2024 – May 2024 Hong Kong, China

## COURSEWORK

**Research Interests:** Machine Learning Theory, Optimization, Information Theory.  
**Grade:** 90.40/100, **GPA:** 3.92/4.3.  
**Courses:** Optimization Methods, Mathematical Programming, Foundations of Data Science, Numerical Analysis and Scientific Computing, Numerical Methods for ODEs and PDEs, Probability, Stochastic Process, Financial Mathematics, Differential Geometry.

## RESEARCH EXPERIENCE

<b>Scaling Limits of Infinitely Deep Neural Networks</b> Advisor: Prof. Fenglei Fan, The Chinese University of Hong Kong <ul style="list-style-type: none"><li>Built the theoretical framework for a special class of shortcut networks with infinite depth and finite width by weakly dependent process theory. Generalized the neural tangent kernel (NTK) properties from infinitely-wide networks to infinitely-deep networks and helped understanding the width-depth equivalence of neural networks.</li></ul>	Jan. 2024 – Present
<b>Kernel Estimation-based Bayesian Optimization and Monte-Carlo Planning</b> Advisor: Prof. Zhenli Xu, Shanghai Jiao Tong University <ul style="list-style-type: none"><li>Proposed the improved kernel regression upper confidence bound (IKR-UCB) algorithm under the Bayesian optimization framework, which is derived from the count-based exploration and the error bound of Nadaraya-Watson kernel regression. Conducted experiments and plotted graphs to verify its performance on quasi-uniform sampling and optimization.</li><li>Proposed the IKR-UCT algorithm to generalize Monte-Carlo tree search into continuous state-action spaces. Conducted experiments to show its computational efficiency and competitive performance in online planning tasks.</li></ul>	Nov. 2022 – Present
<b>Summer School on Mathematical Methods in Science and Engineering</b> School of Mathematical Sciences, East China Normal University, Shanghai, China <ul style="list-style-type: none"><li>Implement convolutional neural networks using NumPy and apply to image classification tasks.</li><li>Learn the principles of filtering and compressive sensing methods and apply them to image denoising.</li></ul>	Aug. 2023

## AWARDS AND HONORS

### COMPETITIVE MATHEMATICS

<b>Winning Prize</b> in S.-T. Yau College Student Mathematics Contest on Appl. & Comp. Mathematics	May 2024
<b>Finalist Winner</b> in Mathematical Contest in Modeling (Top 3% in 18000+ teams)	May 2024
<b>1<sup>st</sup> Prize</b> in Shanghai Division of Chinese Mathematics Competitions	Nov. 2023
<b>2<sup>nd</sup> Prize</b> in Asia and Pacific Mathematical Contest in Modeling	Nov. 2023
<b>1<sup>st</sup> Prize</b> in “Huashu Cup” National Mathematical Contest in Modeling	Aug. 2023
<b>1<sup>st</sup> Prize</b> in Chinese High School Mathematics League	Oct. 2020

## HONORS

<b>Huawei Scholarship</b> in Shanghai Jiao Tong University	2023
<b>Zhiyuan Outstanding Leader Scholarship</b> for excellent leadership in Zhiyuan College	2022
<b>1<sup>st</sup> Prize Scholarship</b> for Academic Excellence in Shanghai Jiao Tong University (Top 2% undergraduates)	2022
<b>Merit Student</b> in Shanghai Jiao Tong University	2022
<b>Zhiyuan Honors Scholarship</b> for academic excellence in Zhiyuan College	2021, 2022, 2023

## COURSE PROJECTS

---

**Dendritic Computing with Bilinear Rules and Artificial Neural Networks** Fall 2023

*Topic Course III, 95/100*, lectured by Prof. Douglas Zhou

- Constructed bilinear rules of dendrite integration from theory to practice. Implemented artificial neural network models hLN and DBNN to fit real neuron data, and discussed the limitation of ANN's parametric space.

**Solving Differential Equations with Deep Learning** Fall 2023

*Foundations of data science, 97/100*, lectured by Prof. Zhi-Qin John Xu

- Implemented the framework of physics-informed neural network (PINN) for both direct and inverse problems. Analysed the components of prediction error and improved them by incorporating more physics information.

**Modeling and Optimization of Biological Transport Networks** Spring 2023

*Topic Course II, 99/100*, lectured by Prof. Dan Hu

- Analysed the dynamics of the biological transport network. Implemented different optimization algorithms, and explained the entangled-network phenomenon of results based on the spectrum of the graph Laplacian matrix.

**Computational Mean-field Optimal Control** Spring 2023

*Numerical Methods for ODEs and PDEs, 96/100*, lectured by Prof. Lei Li

- Studied a class of reaction-diffusion equation mean-field information dynamics. Implemented the primal-dual hybrid gradient algorithm to solve the concerned saddle point problem.

## SKILLS

---

**Programming Languages:** Python, Matlab, C/C++, R, L<sup>A</sup>T<sub>E</sub>X, Markdown

**Toolkits:** NumPy, SciPy, Sklearn, Pandas, Statsmodels, Matplotlib, PyTorch, Numba, Gurobi, Copt

**Language Proficiency:** Mandarin (native), English (fluent, CET-6: 560), Hokkien (native)

**Leadership:** Class monitor from 2021 to 2023, executive of Mathematical Modelling Association of SJTU
